

Simple Time counting system can be used for car racing, running or other types of competition. The time starts to count when a car crosses star line and automatically stops when it

crosses the finish line. Start and stop time is fixed by infrared units, connected to the computer. Software is also control signal lights – red and green: wait and go. All competitors and their personal data, including cars models, are loaded into database. After all, the results list can be sorted out by the best times and printed. Video out option allows to represent current racer result or score table on the big TV screen. System allows to calculate time in one thousandth part of the second. Moreover, the system is also prepared to work in a sunny day and avoid improper operation of the infrared units. It requires only +12V power supply and allows to use standard car battery, what is extremely
