

Live voting system TEXTUS VOTING

Live voting data on air – frequently used method to communicate with TV viewers. TEXTUS VOTING system accepts real time voting info and goes on air immediately. Data can be stored in a simple text file, database record or internet www page. Templates can be prepared with graphics editor software TEXTUS EDITOR. You can choose any TRUE TYPE font of any size, color, different symbol attributes. Background can be graphic picture or animated video. Voting results can also be showed as moving graphic lines with selected speed, depending on percentage. There are several percentage calculation methods, chosen by the customer. Results can be automatically sorted out to have all records in a single line accordingly to the amount of votes. 4 independent layers allow flexible composing of titles.

TEXTUS VOTING system allows to go on air with SMS chat or similar info. SMS messages are provided by telephone company. Customer can select any font, color, different attributes for SMS messages text. SMS separator is prepared as a graphic file. Animated video for background can be set as well. Time for showing SMS message is chosen by the customer. SMS messages can be on air also as crawling line with speed chosen by customer. System also provides an emergency mode and allows to switch into manual mode if there is no data from the voting server. Voting system can operate as a source for video switcher (DSK FILL, DSK KEY output signals) or as titles inserter into the video signal. System provides BYPASS function when computer is turned off. External mixer fader also offers manual control of the mixing level and BYPASS function.
